PROFESSIONAL SUMMARY

Enthusiastic and detailed-oriented web developer with experience in building dynamic web applications using Nextjs, React and Expressjs. Proficient in leveraging Python for backend development, with a strong emphasis on optimizing user experience and deploying efficient solutions.

EXPERIENCE

Identity studio

Freelance Developer

- Engineered a centralized point of sales system for a barbershop client, enhancing client revenue monitoring across multiple branches and providing critical business insights using Nextjs, Expressjs, Tailwind, and Supabase.
- Collaborated with clients to customize solutions that align with the specific operational needs, achieving high levels of client satisfaction.
- Developed technical documentation to facilitate system maintenance and future updates, ensuring long term client support.
- Solicited feedback from end-users to continuously improve application functionality and design.

SP. Madrid & Associates

A.I Prompt Engineer Intern

- Assisted in creating an inventory tracking system using Nextjs, Express, Tailwind, and Supabase, allowing for real-time monitoring of stock levels and sales data.
- Automated data extraction from web sources to ERP-ready Excel files, significantly improving the efficiency of the inventory management system.
- Engaged in collaborative development efforts to ensure the system was user-centric and client specifications.
- Supported project implementation by performing system testing and troubleshooting, ensuring a seamless rollout and user experience.
- Documented code and development user manuals for non-technical clients, facilitating easier use of the inventory management software.

PROJECTS

Talk2us

Developer

- Designed and developed an NLP-powered complaint management system for Barangay San Roque Victoria Laguna, leveraging ReactNative, Expressjs, Firebase, and python to automate complaint submissions based on user messages.
- Utilized modern web technologies to create a responsive mobile application, resulting in enhanced user access and interaction.
- Conducted testing phase to ensure system reliability and performance under various user scenarios, achieving optimal functionality.
- Focused on developing a chatbot feature to streamline user interactions and efficiently manage feedback.
- Collaborated with community stakeholders to gather requirements, ensuring the final product met user needs and expectations.
